Risk assessment data processing

Version: 20220214

Supplier	Cloudflare
What we store	Cloudflare is a CDN that stores cached data across servers world wide. The data is stored for u to 24 hours.
Geo location of data	Mostly europe, but for some events some data may be cached in other places due to the location of the participants.
Type of data	Cached data
Reason for use	To have a high performance service
Risk of transfer to countries outside EU / EEC	The risk of transfer outside EU/EEC is low, but can be allowed within SCC. See more info under documentation.
Other risks	None
Summary	A industry leader in CDN, the use of this service reduces risk of data leaks.
